

This architectural drawing shows a side elevation of a building with a mansard roof. The roof is characterized by a double slope, with the upper slope being steeper than the lower one. The roof surface is covered in horizontal lines, suggesting a material like slate or a specific shingle pattern. Along the eaves of the roof, there are decorative moldings and a series of small, rectangular windows or vents. The main facade of the building is divided into three vertical sections by two prominent vertical lines. Each section contains a series of windows. The windows are arranged in a regular pattern, with some having multiple panes. The drawing is a black and white line drawing, typical of architectural plans. There are some small, circular annotations near the roofline, possibly indicating specific features or measurements. The overall style is that of a technical drawing from a past era, possibly 19th or 20th century.
